

## **William F. Ryan Community Health Center**

### **Position: Data Analyst**

Under the direction of the Database Manager, the Data Analyst will support activities that provide a comprehensive evaluation and tracking program from the Electronic Medical Record (e-HR) environment for the Ryan Center. The evaluation program will be utilized to monitor and track data collection and reporting for all Network programs, including but not limited to Prevention programs and high risk populations using enhanced technologies. The Data Analyst will develop, support and monitor Ryan Center's EHR evaluation program to insure ongoing tracking of measures of integrated patient-facing technologies including Patient Portal. In conjunction with the EHR project team, the Data Analyst will build and analyze reports and surveys and make recommendations based on measures to improve performance outcomes.

### **Scope of Duties**

1. Develop a comprehensive evaluation and tracking program by creating and maintaining the reports for baseline measures and ongoing review of measures using EHR data fields, templates and reports, utilizing tools including eBO, registries, and other tools and integrated technologies and processes as required. Actively monitor enhanced data collection activities in conjunction with Project teams to ensure program compliance.
2. Assist the Database Manager, CIO and other IT management staff in developing and maintaining e-HR evaluations by using business intelligence and patient engagements solutions that meet the Ryan Centers clinical, financial, and operational requirements.
3. Analyze and report operational and clinical evaluation data to the Project team for the Ryan Network; select, extract, compile and transform interconnected data elements into meaningful information requested by the clinical leadership for decision-making purposes and to drive improved program outcomes included but not limited to Prevention and Programs for Chronically Ill and High Risk populations.
4. Work closely and collaborate with external agencies in data sharing evaluation activities as directed by the Database Manager.

Collect, analyze, and document quarterly measures of data points and enhanced processes to meet program evaluation objectives
