

William F. Ryan Community Health Center

Position: EHR Quality Analyst

Purpose: Under the direction of the Database Manager, the EHR Quality Analyst will support activities that provide a comprehensive Electronic Medical Record (e-HR) environment for the Ryan Center that facilitates a streamlined process for data collection and reporting for all Network programs, including, but not limited to, Prevention programs and high risk populations using enhanced technologies. The e-HR Quality Analyst will maintain, configure, support and troubleshoot Ryan Center's EHR application and integrate patient facing technologies including Patient Portal. In conjunction with the EHR project team, the e-HR Quality Analyst will build templates, develop structured data fields and generate reports that support the practice management, clinical and operational requirements of the Ryan Network to fulfill Program objectives.

Scope of Duties

1. Develop, test, configure and update EHR data fields, templates and reports utilizing tools including eBO, registries, and other tools and integrated technologies and processes as required and actively drive enhanced data collection activities in conjunction with Project teams.
2. Assist the Database Manager, CIO and other IT management staff in developing and maintaining e-HR business intelligence and patient engagement solutions that meet the Ryan Center's clinical, financial, and operational requirements.
3. Analyze and report operational and clinical data to the Project team for the Ryan Network; select, extract, compile and transform interconnected data elements into meaningful information requested by the clinical leadership for decision-making purposes and to drive improved program outcomes included but not limited to Prevention and Programs for Chronic Care and High Risk populations.
4. Work closely and collaborate with external agencies in data sharing activities for Health Information Exchange, Meaningful Use Incentive Program and Patient Centered Medical Home Initiatives .
