**M**SI Area Health Education Center programs target students from underrepresented and underserved groups, in an effort to increase diversity in the health professions. We provide resources and develop opportunities for participants to further their health career goals. Our internship programs place students for six weeks in hospitals, community health centers, and health organizations. We provide students with didactic curriculum and staff support to supplement their internship experiences.

### Can you support our future healthcare workforce with an internship placement?

Visit our website and contact us to learn more about our programs for students who are motivated to learn about career pathways into the health professions.
